QUICK NOTE
Start writing...
Press ^⌘N anytime to show this window

These 2 buttons do not work anymore.

Capture screen - ^⌘⌫

Convert to note

Gary, I just updated to 10.4.4 and a feature that I use ALL THE TIME isn't working. I use "Capture Selection" all the time from the quick menu at the top of my Mac OS 10.14.6 screen to capture a portion of my screen to save as a note. This isn't "web clipper" or associated with a web browser of any kind. It's simply being able to select "Capture Selection" and draw a box around what I want to save or share. There are three icons: "Capture Screen" (which works - but I never want to capture my entire screen) "Capture Window" (which doesn't work) and "Capture Selection" (which doesn't work either). PLEASE HAVE THE TEAM FIX THESE BUTTONS. I use "Capture Selection" everyday and now it doesn't work. I'm sad.
